

# Your BrainScope Results

BrainScope provides two results to aid in the assessment of your head injury.

---

## Brain Bleed Assessment (SIC)

1. Indicates the likelihood of a brain bleed to help your healthcare provider determine the need for head CT scan

- Likely no brain bleed visible on head CT
  - Unable to rule out likelihood of brain bleed visible on Head CT – may indicate need for further evaluation
- 

## Concussion Assessment (BFI or CI)

2. Indicates the likelihood of concussion / brain function impairment

Your result \_\_\_\_\_

- Concussion referral not indicated
- Referral for concussion management
